Frequently Asked Questions

Q. Do all 3D movies use that same type of glasses?

A. NO they do not. There are many different types of anaglyph formats and of late active and non-active 3D glasses being used for viewing 3D movies at home. You need to choose the right format glasses for the right movie.

Q. Can certain colour 3D glasses be used for more than one 3D movie?

A. YES they can. There are some major anaglyph colour formats including new ones that are being used for multiple 3D movies. These include Red / Cyan, Green / Magenta and ColorCode.

Q. Can I use Circular polarised 3D glasses, like the ones they use at the cinema at home with my 3D TV or to watch 3D broadcast television?

A. You must have a 3D compatible TV to be able to watch TV programmes that are broadcast in 3D. On top of this you can only use circular polarised (non-active) 3D glasses if you have a 3D TV that supports these glasses.

Most of the 3D TV's being sold on the market today use LCD shutter glasses (Active Shutter Glasses). These TV's are not compatible with circular polarised 3D glasses. EG: The ones you get at the REALD cinema will not work with these 3D TV's or your normal TV.

These types of glasses are mainly for commercial use only and will not work for watching anaglyph 3D movies at home either.

If you want to watch 3D Blu-Ray movies or non-anaglyph 3D movies on your 3D TV you will also need a compliant 3D compatible Blu-Ray player or computer software to support the playback of a field sequential, interlaced or interleaved 3D movie.

Q. Can I view Field Sequential or Interlaced 3D DVD's with Anaglyph 3D glasses?

A. NO you cannot. To view these DVD's you will need to purchase a suitable CRT, LCD, Plasma TV or DLP, LCD projector that supports field sequential viewing and the required software and shutter glasses. You also need a PC or home media centre to run the software.

Q. Can I watch 3D movies using a 3D Blu-Ray player on a normal TV?

A. NO you cannot. To view this content you will need to purchase a 3D enabled LCD, LED or plasma TV in conjunction with the 3D Blu-Ray player.
